**Determination of
Nonsignificance**

The Washington State Department of Ecology (Ecology) is proposing a new general permit for discharges of stormwater, drydock floodwater, and certain other non-routine wastewaters resulting from the deconstruction of vessels over water. The Vessel Deconstruction Permit requires permittees to develop and implement deconstruction and site management and solid waste control plans and comply with applicable limitations. It also details inspection, sampling, and reporting requirements. More information is available here:

<http://www.ecy.wa.gov/programs/wq/permits/vesseldeconstruction/index.html>.

Lead Agency: Washington State Department of Ecology

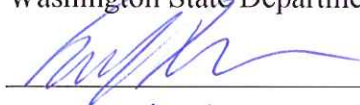

Ecology determined that this proposal does not have a probable significant adverse impact on the environment. RCW 43.21C.030 (2) (c) does not require an environmental impact statement (EIS). Ecology made this decision after reviewing a completed environmental checklist and other information on file with Ecology. The public may request to view this information.

As lead agency, Ecology issued this Determination of Nonsignificance (DNS) under Chapter 197-11-340 (2) WAC. There is no comment period for this DNS.
